                                                                                                                                                                                                                                                                        The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are CC characterised in that at least one amino acid has been substituted by CC a modified amino acid and/or a non-amino acid has been substituted by CC also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by CC chemical modification; an antibody specific for a peptide of the invention are useful for treating and/or diagnosing diseases CC of the invention are useful for treating and/or diagnosing diseases of the invention are useful for promoting infant growth due to growth CC caused by a deficiency in growth hormone expression or activity. In CC particular, they are useful for promoting infant growth due to growth CC no accompanying side effects. The present sequence represents a CC ghrelin-type growth hormone secretagogue (GHS) of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concarcterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a slow encompasses the unmodified peptides; the DNA encoding the peptides ovectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth to macrompanying side effects. The present sequence represents a parellin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ï

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides ovectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, ghrelin analogue, growth-hormone secretagogue, GHS receptor, AIDS, acquired immune deficiency syndrome; weight gain, chemotherapy, dialysis, growth hormone, muscle mass, bone density, sexual dysfunction, anorexia, wasting, radiation therapy, obesity, diabetes, retinopathy, hypertension, cardiovascular disorder, gall scone, ostecarthritis, cancer, cytostatic, metabolic, immunomodulator, anti-HIV, anorectic, ophthalmological,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC females, facilitating a weight gain, maintenance of weight, maintenance of chysical functioning, recovery of physical function, and/or appetite increase; or appetite increase is particularly useful for a patient cc increase, or appetite increase is particularly useful for a patient cc having a disease or disorder, or under going a treatment, accompanied by ceight loss such as anorexia, bulimia, cancer cachexia, acquired cc immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail cc elderly and examples of treatments accompanied by weight loss include cc chemotherapy, radiation therapy, temporary or permanent immobilisation cc and dialysis; and ghrelin antagonal tis utilised to facilitate weight cc loss, appetite decrease, weight maintenance, treat obesity, diabetes and complications of diabetes including retinopathy, and/or cardiovascular cd diseases including hypertension, diabetes, dyslipidemias, cardiovascular cd diseases including hypertension, diabetes, dyslipidemias, cardiovascular cd disease, gall stones, osteoarthritis and certain forms of cancers, and contributing about a weight loss can be used for e.g. to reduce the cc likelihood of such diseases and for treating such diseases. Ghrelin and dose-dependent manner without stimulating the release of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be contributed analogue assily and has increased solubility in physiological buffers. The present sequence is human ghrelin peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

CC females, facilitating a weight gain, maintenance of weight, maintenance of chysical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient companies, or appetite increase is particularly useful for a patient companies of the disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulimia, cancer cachexia, acquired commune deficiency syndrome (AIDS), weathering, cachexia, and wasting in frail celderly and examples of treatments accompanied by weight loss include commotherapy, radiation therapy, temporary or permanent immobilisation and dialysis; and ghrelin antagonist is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular complications of diabetes including retinopathy, and/or cardiovascular complications of diabetes including retinopathy, and/or cardiovascular complications of diabetes weight is a contributing factor to different complications of such diseases including hypertension, diabetes, dyslipidemias, cardiovascular companies, osteoarthritis and certain forms of cancers, and contribution about a weight loss can be used for e.g. to reduce the companies in diseases including the contribution of the contribution of such diseases and for treating such diseases. Ghrelin collisions of such diseases and for treating such diseases of other pituitary hormones. Unlike longer length ghrelin, ghrelin analogue can be synthesised easily and has increased solubility in physiological buffers.

The present sequence is human ghrelin peptide analogue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anoloulimia, cancer, obesity, diabetes mellitus, hypertension, osteoarthritis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; ghrelin analogue; growth-hormone secretagogue; GHS receptor; AIDS; acquired immune deficiency syndrome; weight gain; chemotherapy; dialysis; growth hormone; muscle mass; bone density; sexual dysfunction; anorexia; wasting; radiation therapy; obesity; diabetes; retinopathy; hypertension; cardiovascular disorder; gall stone; osteoarthritis; cancer; cytostatic; metabolic; immunomodulator; anti-HIV; anorectic; ophthalmological; cardiant; litholytic; hepatotropic.

growth-hormone secretagogue; GHS receptor; AIDS;

The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormons secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS caceptor and for stimulating growth hormons secretion. Ghrelin agonist is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient control of sorder, or under going a treatment, accompanied by increase, or appetite increase is particularly useful for a patient control of siscretar, or under going a treatment, accompanied by eight loss such as anorexia, bullmia, cancer cachexia, acquired by immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail contents accompanied by weight loss include conditions of treatments accompanied by weight loss include conditions of diabetes including retinopathy, and/or cardiovascular complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular consisting about a weight loss can be used for e.g. to reduce the bringing about a weight loss can be used for e.g. to reduce the lingining about a weight loss can be used for e.g. to reduce the lingining about a weight loss can be used for e.g. to reduce the lingining analogue induces growth hormone release from primary-culture pituitary cells in a dose-dependent manner without stimulating the release of other continutary hormones. Unlike longer length ghrelin, ghrelin analogue can be synthesised easily and has increased solubility in physiological buffers. Example 4; Page 23; 37pp; English.

```
polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Pathological conditions can also be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the polynucleotide. Specific cancer, tumors, neurodegenerative disorders, development of and fetal deficiencies, blood disorders, scholognental abnormalities and fetal deficiencies, blood disorders, scholognents abnormalities system, autoimmune diseases, inflammation, allergies, Alzheimer's and cognitive disorders, entissue disorders, eschoporosis, arthritis, infections, AlDS, connective tissue disorders, transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, cardiovascular disorders, and reproductive disorders. The polypeptides or polynucleotides can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New human genes and the secreted polypeptides they encode, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

The present invention describes a new method of treating a body weight disorder; increasing muscle mass and decreasing body fat by administration of angiotensin converting enzyme (ACE)-2 modulating compound. The invention can be used for treating body weight disorders, particularly obesity of at least grade 1, diabetes, atherosclerosis and a state associated with lipid metabolism. The method is used for treating rapid weight loss, rapid weight gain, anorexia, cachexia, bulimia, generalised partial lipodystrophy, familial partial lipodystrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; angiotensin converting enzyme-2; ACE-2; body weight disorder; muscle mass; body fat; obesity; diabetes; atherosclerosis; weight loss; lipid metabolism; weight gain; anorexia; cachexia; bulimia; sepsis; familial partial lipodystrophy; hypercholesterolaemia; hyperlipidaemia; aberrant metabolic rate; heart failure; left ventricular hypertrophy; neurodegenerative disorder; peptide hormone; cytokine processing; myocardial infarction; cardiomyopathy; inflammatory bowel disease; systemic inflammation response syndrome; polytrauma; pain; stroke; bone destruction; rheumatoid arthritis; osteoarthritis; asthma; periodontal disease; dymenorrhoea; premature labour; brain oddema; focal injury; diffuse axonal injury; reperfusion injury; scar formation; cerebral vasospasm; subarachnoid hearthries; altergic disorder; adult respiratory distress smallergic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     also be used as food additives or or decrease storage capabilities, carbohydrate, vitamins, minerals,

0

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted !

       also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides; opeptides comprising recombinant production, optionally followed by experience modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a truncated ghrelin analogue or their salt, active at growth-hormone secretagogue (GHS) receptor. Ghrelin analogue is useful for screening a compound capable of binding to GHS receptor and for stimulating growth hormone secretion. Ghrelin agonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension,
                                                                                                                                                                                                                                                                                                                 Gaps

is utilised for treating a growth hormone deficient state, increasing muscle mass and bone density, treating sexual dysfunction in males or females, facilitating a weight gain, maintenance of weight, maintenance of physical functioning, recovery of physical function, and/or appetite increase is particularly useful for a patient and adisease or disorder, or under going a treatment, accompanied by eight loss such as anorexia, bulina, cancer cachexia, acquired immune deficiency syndrome (AIDS), wasting, cachexia and wasting in frail eiderly and examples of treatments accompanied by weight loss include chemotherapy, radiation therapy, temporary or permanent immobilisation and dialysis; and ghrelin antagonist is utilised to facilitate weight complications of diabetes including retinopathy, and/or cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular diseases including hypertension, diabetes, dyslipidemias, cardiovascular chiseases, galls atones, osceoarthritis and certain forms of cancers, and bringing about a weight loss can be used for e.g. to reduce the consideration and one such an analogue induces growth hormone release from primary-culture pluniarry cells in a dose-dependent manner without strimlary abrelin analogue can be synthesised easily and has increased solubility in physiological buffers. ö acquired immune deficiency syndrome; weight gain; chemotherapy; dialysis; growth hormone; muscle mass; bone density; sexual dysfunction; anorexia; wasting, radiation therapy; obesity; diabetes; retinopathy; hypertension; cardiovascular disorder; gall stone; osteoarthritis; cancer; cytostatic; metabolic; immunomodulator; anti-HIV; anorectic; ophthalmological; cardiant; litholytic; hepatotropic. ```
The present invention relates to a truncated ghrelin analogue or their CC salt, active at growth hormone secretagogue (GHS) receptor. Ghrelin CC analogue is useful for screening a compound capable of binding to GHS receptor and for strimulating growth hormone secretion. Ghrelin agonist is utilised for treating a growth hormone secretion. Ghrelin agonist CC muscle mass and bone density, treating sexual dysfunction in males or CC females, facilitating a weight gain, maintenance of weight, maintenance of freight loss such as anorexia, bulimia, cancer cachexia, acquired configurated as such as anorexia, bulimia, cancer cachexia, acquired configurated efficiency syndrome (AIDS) wasting, cachexia and wasting in frail celerly and examples of treatments accompanied by weight loss include chemotherapy, radiation therapy, temporary or permanent immobilisation complications of diabetes including retinopathy, and/or cachiovascular complications of diabetes including retinopathy, and/or cacdiovascular diseases including hypertension, diabetes, dysliphdemias, cardiovascular cdisease, gall stones, osteoarthritis and certain forms of cancers, and contrained by and has increased solubility in physiological buffers. The present sequence is human ahrelin peptide analogue can be synthesised easily and has increased solubility in physiological buffers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Truncated ghrelin analogs active at growth-hormone secretagogue receptor useful for diagnosing or treating diseases such as anorexia, bulimia, cancer, obesity, diabetes mellitus, hypertension,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 4; Page 33; 37pp; English
present sequence is human ghrelin peptide analogue.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
